Position Summary

1. Secure an optimal digital IP and circuit by understanding required functions to be developed and designing and verifying them in line with the required goals.

Role and Responsibilities

1. [Identifying requirements] Understand digital IP and circuit design requirements by using an objective index.
2. [Modeling] Identify required functions by modeling requirements. Use them as standards for architecturing and designing.
3. [Architecture design] Establish an operation scenario and design an optimal architecture.
4. [Design] Participate in designing functions which are defined in architecture.
5. [Verification] Verify a design by building a verification environment.
6. [Making a technical document] Make a technical document related to digital IP and circuit design.

Skills and Qualifications

- Experienced professional with full understanding on specialized areas; resolves a wide range of issues in creative ways
- Works on problems of diverse scope where analyzing data requires evaluating identifiable factors. Demonstrates good judgement in selecting methods and techniques for obtaining solutions
- Normally receives little instruction on day-to-day work and receives general instructions on new assignments
